

COURSE DOCUMENTATION

AI for Managers

AI, Already Installed

A SEVEN-DAY PRACTICAL PROGRAM

Program at a Glance

Day	Theme	Output
01	AI Mindset for Managers	Personal AI Opportunity Map
02	Communicating & Working With AI	Manager Prompt Library
03	Documents, Meetings & Knowledge	Manager Knowledge Assistant
04	Data & Decision Making	AI Decision Brief
05	AI Workflow & Automation	One Working AI Workflow
06	Managing an AI-Powered Team	Team AI Playbook
07	AI Strategy & 30-Day Roadmap	30-Day Implementation Plan

THE COURSE IS BUILT HANDS-ON: EVERY DAY PRODUCES A REAL, USABLE OUTPUT — NOT A LECTURE.

01 AI Mindset for Managers

Before touching any tool, managers map their actual week — emails, meetings, reports, decisions — and sort each task into Do, Delegate, Automate, or Eliminate. Every task is then scored by value, frequency, and risk, so the day ends with a ranked list, not just an inventory.

DELIVERABLE

Personal AI Opportunity Map — a ranked list of exactly where to start.

02 Communicating & Working With AI

Managers learn to use AI that already lives inside their everyday tools — native scheduling, reporting, and search — before ever opening a prompt window. From there, they build a small library of reusable prompts for the roles they actually need: report writer, meeting summarizer, proposal reviewer, research assistant.

DELIVERABLE

Personal Manager Prompt Library — 10+ reusable prompts built from their own work.

03 Documents, Meetings & Knowledge

Managers turn scattered documents, policies, and meeting notes into an AI-assisted knowledge process — asking what happened, what changed, what risks exist, and what decisions are needed, instead of reading everything themselves cover to cover.

DELIVERABLE

Manager Knowledge Assistant — a repeatable process for turning documents into answers.

04 Data & Decision Making

Working with a real business dataset, managers practice using AI as an analytical partner rather than an oracle — asking what's happening, why, what evidence supports it, and what options exist. The manager remains responsible for the final call; AI's job is to shorten the distance to a good decision.

DELIVERABLE

AI Decision Brief — a one-page document: problem, evidence, options, recommendation.

05 AI Workflow & Automation

Managers connect AI directly to the tools their team already runs on — a task board, a chat app, a document store — instead of working around a chatbot in a separate tab. One real, repetitive process, chosen back on Day 1, gets redesigned end to end and tested live.

DELIVERABLE

One working AI-powered workflow, built on their own backlog or inbox.

06 Managing an AI-Powered Team

Managers address the questions that come after adoption: what should employees hand to AI, how is output verified, which decisions must stay human, and what information should never go into a public AI tool. This is where AI stops being a personal habit and starts being a team standard.

DELIVERABLE

Team AI Playbook — a one-page policy covering approved uses, review requirements, and data rules.

07 AI Strategy & 30-Day Roadmap

All identified opportunities are scored together and ranked by value, frequency, and risk. Each manager leaves with a week-by-week plan: select a problem, build and test, run it against real work, then measure and standardize what works.

DELIVERABLE

A signed-off 30-Day AI Implementation Roadmap.

Who This Is For

PARTICIPANTS

Managers and team leads, operations and admin staff, and anyone responsible for a team's output. No coding, and no technical background required.

WHAT YOU BRING

One real, recurring problem from your own work — a report you dread, a backlog nobody triages, an inbox that eats your mornings, or a decision that keeps stalling. The course is built around solving it, not around a hypothetical case study.

FORMAT

Roughly 70% hands-on, 30% concept. Every session produces something you keep and can use the following week.

What You Leave With

- ◆ Personal AI Opportunity Map
- ◆ Manager Prompt Library
- ◆ Manager Knowledge Assistant
- ◆ AI Decision Brief
- ◆ One working AI-powered workflow
- ◆ Team AI Playbook
- ◆ 30-Day AI Implementation Roadmap

Not a certificate. A working system.

Extras

BUILT AROUND YOUR TOOLS

Every organization runs on a different mix of tools — a different task board, a different chat app, a different CRM. The course adapts to whichever tools your team already uses; nothing here depends on one specific platform.

FLEXIBLE BY DESIGN

This document outlines the program's structure and what participants can expect to leave with. Day order, exercises, and depth can be adjusted to the group's experience level and the problems they bring.

INVESTMENT

Program pricing and scheduling can be discussed directly, based on group size and format.
